

PROTECT YOUR FENCE CHARGER!

When an electric fence is built and grounded properly a lightning magnet is created! The EFL 24" Lightning Fuse is the only external fuse on the market that protects your fence charger from lightning trying to get into it from the hot or ground side.

<p>This fence is protected by our 24" Lightning fuses! One connects to the hot side and one to the ground side.</p>	
	<p>When lightning strikes the fence it travels back across the fence trying to get to ground or your fence charger. The 24" Lightning Fuse does not let it!</p>
<p>This fence is not protected by our 24" Lightning Fuses. When lightning strikes it travels back across the and does damage to the fence charger.</p>	
	<p>Lightning can also come up the ground rod or come across the ground line and do damage to the fence charger.</p>
<p>The 24" Lightning Fuse will also protect your fence charger from lightning coming from the ground side!</p>	

Remember: Due to the force of lightning it is too late for protection by the time it gets to your fence charger. Keep it away from it all together. Protect your fence charger with the 24" Lightning Fuse!
